

Verizon has filed a petition with you asking to stop regulating broadband service. I am against this petition because this large telephone company already controls a huge majority of the market (ISP service) and they could refuse to provide the necessary connections for DSL service and no ISP would be able to sell DSL. The service I currently have could be wiped out and forgotten forever...the service my business relies on so heavily. Please consider the long term effects of deregulating broadband service. These small companies that built the internet should not be wiped away and replaced by a huge monopoly!

Thank you
